TMD Security launches enhanced anti-skimming product

Today TMD Security globally launches the latest product in anti-skimming solutions: CPK+ 6001. This enhanced CPK has been developed to protect ATMs against all sorts of skimming, including stereo skimming.

The intelligence available at competitors, and in criminal organisations to develop skimming techniques, should not be underestimated at all. These circumstances have lead TMD Security to further bring our developed technology to perfection and design the CPK+ 6001 products. The CPK+ 6001 line is unique in the world and is the only multivendor solution to protect ATMs against stereo skimming. CPK+ 6001 is based on renowned CPK architecture, complemented with newly developed customized bezels and state of the art loop transmitter technology. The goal is to remain ahead with protection against techniques applied by skimming criminals, and to be able to provide protection for advanced future skimming techniques.

TMD Security constantly researches and develops new solutions in order to provide protection against future attack methods from criminals. Today TMD Security launches the CPK+ 6001. For more information, please check www.tmdsecurity.com.

About TMD

TMD Security is global leader in providing high-end anti-skimming technology for ATMs and SSTs with an installed base of over 100,000 units. Years of experience, the TMD Research & Development Center and a global network of partners, suppliers and law enforcement authorities, provide TMD Security all the knowledge to be innovative and remain one step ahead of skimming criminals. For many years major banks all over the world are successfully using our technologies to protect their ATMs. TMD Security strongly believes that serious threat demands serious protection.
