

OR IMMEDIATE RELEASE

Enterprise Fleet Management Announces New Website Enhancements

*New features customize and maneuver information based on
user preferences*

December 5, 2008, St. Louis – Enterprise Fleet Management, a full-service fleet management company for businesses with medium size fleets, has added several new features to its suite of online reporting solutions. In addition to making it easier for customers to select how their account information is presented on the Dashboard, the Web site’s new format and functionality provides information faster and more efficiently.

“The redesign is based on customer surveys and internal feedback from local account teams nationwide,” said Jeff Schuchardt, Assistant Vice President for Enterprise Fleet Management, who added that over 3,000 of its fleet management customers have an online account with Enterprise. “From the Dashboard to the new reporting to the underlying architecture, the Web site enhancements add value for our customers by streamlining processes and improving efficiencies. It enables customers to spend more time managing their businesses instead of their vehicles.”

The Dashboard has many special features to give the customer a lot of information at their fingertips. There are modules for fleet size, billing, vehicle disposal, and if applicable, fuel expenses and risk management. Information can be customized and saved to suit each user’s preference, including the ability to expand or collapse modules, as well as to “drag and drop” them to any location on the Dashboard. Once moved, the modules remain in position until the user decides to make a change. The Dashboard also enables the customer to make decisions regarding which information can be shared with other individuals or departments within their company.

Another of the Web site's key enhancements is the ability for customers to format how they want their fleet report data formatted. Working with their account service representative, customers can customize reports, including changing the sort order, removing certain data, re-aligning column order and highlighting key/exception data. All reports, both standard and customized, can be exported in multiple formats (XLS, CSV and PDF) and can be e-mailed as an attachment when new reports are available. This makes it easier for the customer to organize information according to its own company's internal practices and business systems.

New features also include the ability to record and report mileage, both for total miles and/or for a driver's personal use. These mileage entries can be performed either unit-by-unit or for all vehicles in a fleet. While reports generated from these entries can be used by companies to assist them with their W2 reporting for internal use, if applicable, companies should consult a tax advisor regarding the best treatment of this personal use option. Also, a company can choose to create a driver login for drivers to enter their own mileage, if that is more consistent better with their company's business model.

Just as important, navigation within a company's hierarchy has also been improved. Company headquarters with multiple divisions or sub-companies will appreciate the new Web site's ability to categorize all information without requiring repeated separate log-ins and passwords to gain access. The company headquarters also may also choose which, if any, information is able to be shared across divisions or departments.

About Enterprise Fleet Management

Enterprise Fleet Management, a division of Enterprise, is a full-service fleet management company for businesses with mid-size fleets. With 57 fully staffed offices nationwide, it supplies most makes and models of cars, light and medium duty trucks and service vehicles to businesses across the United States. In addition to supporting a comprehensive set of environmental initiatives that includes helping customers purchase

verifiable greenhouse gas emission offsets, Enterprise pledges to match a portion of each customer's greenhouse gas offset purchases up to a total match of \$1 million. Enterprise has been recognized with the Automotive Service Excellence (ASE) "Blue Seal of Excellence" award for 11 consecutive years, an industry record.
